## COUNCIL OF ARCHITECTURE pegs for a safer tomorrow at IFSEC India & Firex India 2008

As building codes and fire protection technology evolve, fire protection plays an increasing role in the construction process. The goal of building fire protection has changed from primarily one of property protection to protection of life, property and continuity of operations.

Mission-critical facilities, iconic and historical buildings are targets of terrorist attacks. Strategies and measures are required to reduce, if not to prevent, possible loss and damage due to the negative fallouts of hazards of terrorism

### Architect - A key player in the "Safe and Secure Facility"

Invariably the Architect is a key player together with the specifier/builder in the building design and construction process. Hence it is imperative that the architect is up to date on the Fire and Security systems and technology that are available to meet the goal of life safety, property fire protection.

In the rapidly changing environment of building and fire regulations there is a growing need for the architect to know about the Fire codes and the products and technology available.

**CMP**, organizer of world largest security and fire show, IFSEC event at Birmingham for the past 36 years, is jointly organizing the 2nd edition of the successful **IFSEC India & FIREX India**, South Asia's largest International Fire & Security Exhibition, 16 - 18 October, 2008, Pragati Maidan, New Delhi.
