Preamble

The Covid -19 crisis has raised a series of queries about the challenges of the post-pandemic world. It is of high demand for an emergency transitional model from the conventional systems of Architecture Practices and Education. This online discourse would articulate the Role of Architecture practice in strengthening architecture education, especially in the post-Covid scenario, when we have to innovate the teaching-learning process. It would also bestow an opportunity to look into the negative traits and outdated tendencies of our Architectural Education and Practices.
