### PREAMBLE:

The need of the hour is to harness natural resources and optimize usage of materials that cause damage to nature, which in a word means Sustainability. Sustainable environments that are possible adopting sustainable methods, measures of planning and architecture. This stands out to be a great challenge to Architects and Planners in the present day. An Architect can be creative and a planner more rational as long as the focus is not shifted. The focus is to DECODE NATURE. Nature gives the solution for everything. But we need to decode nature to understand nature.

This particular TTP is programmed to explore the ideas to achieve sustainability. Methods and practices of construction, Architectural Design concepts, Choice of Materials, climate responsive approaches etc, that help support nature, propagate healthy living standards. The program dwells on new technological advances that can build a strong bond between nature and the human beings. Millions of Sqm is constructed day by day and year by year, but how much of it is supportive and how much damaging to nature. The Program invites people with innovative technologies and professionals (Architects and Planners) with creative ideas to deliberate and demonstrate practices that bring together sustainable environments that can build and protect future.
