

Conscious Induction of Skills in Architectural Pedagogy: The Need of Time

Assignment: To be submitted by 25th July 2020

Architecture is a Skill based profession. It is essential to consciously induce various **tangible & intangible skills** in the Architectural Curriculum, move out from studios to outdoors and adopt skills based methodologies, in order to make way for the new dimension to come in.

This Training Program is an attempt:

- to begin the process of change,
- to motivate Architectural pedagogy to look at ways and means towards an integral holistic development of the student and
- to consciously look at Architectural Pedagogy with a new perspective that is inclined towards **Skill development**.

Experts have thrown light on what are the skills that are needed to be imbibed in the students throughout their studies in order to mould them into confident and capable professionals.

Dear Participants,

You are invited to dwell upon the questions,

1. How does one think these skills should be demonstrated & transmitted **through the use of various tools & techniques** to the students.
2. How to constructively engage students in hands-on activities, to further explore the concepts taught in the classroom and develop a better understanding of the same.

Given below are links to two forms.

You are requested to fill out and submit both, assignment and feedback on or before **25th July 2020** so as to enable us to provide a certificate.
